Summary

Python Developer with experience building scalable web applications and RESTful APIs using Django and Django REST Framework. Skilled in designing database-driven applications with MySQL and MongoDB, implementing authentication systems, and optimizing backend performance. Strong foundation in object-oriented programming, API development, and full-stack integration with React.

Skills

Technical Skills

- Programming: Python 3, JavaScript, C
- Backend: Django, Django REST Framework, REST APIs
- Frontend: React, HTML5, CSS3
- Databases: MySQL, MongoDB, PostgreSQL
- Tools & Deployment: Git, GitHub, Postman, Ubuntu (Linux), Render, Vercel
- Concepts: OOP, MVC Architecture, CRUD, Authentication, API Integration

Soft Skills

- Teamwork, Adaptability, Time Management

Experience

MERN Stack Developer – Zecser Business LLP

Aug 2025 – Oct 2025

- Developed full stack features using React and backend RESTful APIs, implementing CRUD operations and database interactions.
- Integrated React frontend with RESTful backend services, handling HTTP requests, JSON data exchange, and input validation.
- Performed API testing and validation using Postman, improving request-response reliability and error handling.
- Optimized MongoDB queries and improved data retrieval performance across application modules.

Education

B.Tech in Computer Science and Engineering

Government Engineering College Idukki, Kerala

Nov 2021 – Jun 2025

Certifications

- **Advanced Python, Django with AI**
HACA, Calicut

Projects

FolioX – Financial Portfolio Management System [GitHub Repository](#)

2025

- Tech Stack: Flutter, Django.
- Built a cross-platform financial portfolio management application using Flutter, Django, Django REST Framework, and Firebase to track investments across multiple asset classes including stocks and mutual funds.
- Developed 10+ RESTful API endpoints using Django REST Framework for portfolio tracking, financial goal planning, and asset value calculations.
- Implemented portfolio performance analysis and financial goal planning features to calculate asset values, track investment growth, and assist users in managing investment strategies.

- Integrated Firebase for cloud-based data storage and real-time synchronization of user portfolio data and financial records.
- Implemented market monitoring features including stock news tracking and portfolio analytics dashboards to provide users with financial insights.

Farmers Portal – Agricultural Bidding Platform [GitHub Repository](#)

2024

- Tech Stack: React, Node.js, MySQL.
- Developed a web-based agricultural marketplace using React, Node.js, and MySQL enabling farmers to list products and buyers to participate in competitive bidding.
- Implemented role-based authentication and authorization for three user roles (Farmer, Customer, Admin) with admin approval workflows for product listings and transactions.
- Built product listing, bidding, and bid monitoring modules supporting real-time bid updates and transparent price discovery.
- Designed a relational database schema for users, products, bids, and government scheme records to support efficient data storage and retrieval.
